

# THE NEW MAULE M-4-180V

For over 40 years, Maule has been producing some of the finest aircraft in general aviation. Known around the world for their impressive STOL (short take-off and landing) performance, Maule Air, Inc. has unveiled its latest addition to the Maule family of aircraft, the Maule M-4-180V. The new M-4-180V is an updated version of the original M-4 model which the company started producing in 1962. With its rounded tail and control surfaces, this beautiful aircraft brings back memories of grass roots flying.

## Features

Equipped with Maule's latest flap design including its -7 degree flap setting, which reduces drag for increased cruise speed (Approximately 138 mph TAS).

Two place, side by side seating allows both pilot and copilot excellent forward visibility.

The M-4-180V's Two Seat Design also translates into Lower Insurance Costs.

Available with a Fixed Pitch or Variable Pitch Propeller.

Extensive List of Standard and Optional Equipment including Floats and Skis, as well as IFR Avionics Packages.

Abundant Luggage Space behind seats (Up to 18 cubic feet).

Estimated Useful Load - 900+lbs. (std.)

The M-4-180V's extensive list of standard equipment includes a full gyro panel, GPS/Comm with a moving map display, digital transponder, intercom, full interior/exterior light package, and much more.

The amazing versatility of the M-4-180V makes it an excellent choice for countless types of flying. If you want flying to be fun and affordable the choice is clear, the Maule M-4-180V. (Deliveries starting in 2005).
